

Task 4:

1) Declare an array of 5 integer and print all elements

```
#include <stdio.h>
int main() {
    int arr[5];
    printf("Enter 5 integer: \n");
    for(int i = 0; i < 5; i++) {
        scanf("%d", &arr[i]);
    }
    printf("The elements are: \n");
    for(int i = 0; i < 5; i++) {
        printf("%d", arr[i]);
    }
    return 0;
}
```

output:

Enter 5 integer: 10 20 30 40 50
The elements are: 10 20 30 40 50

2) Find the sum of elements in an array of 5 number

```
#include <stdio.h>
int main() {
    int arr[5], sum = 0, i = 0;
    printf("Enter 5 numbers: \n");
```

```

while (i < 5) {
    scanf ("%d", &arr[i]);
    sum += arr[i];
    i++;
}

printf ("Sum of elements : %d \n", sum);
return 0;
}

```

output :

Enter 5 numbers : 10 20 30 40 50
 Sum of elements : 150

3) Input a string and print it

```

#include <stdio.h>
int main() {
    char str[100];
    printf ("Enter a string : \n");
    scanf ("%s", str);
    printf ("You entered : %s \n", str);
    return 0;
}

```

output :

Enter a string : Nivetha
 You entered : Nivetha

4) Print the length of a string using
strlen()

```
#include <stdio.h>
#include <string.h>
int main() {
    char str[100];
    printf("Enter a string: \n");
    scanf("%s", str);
    printf("Length of the string is :
    %lu \n", strlen(str));
    return 0;
}
```

output:

Enter a string : Hello

Length of the string is : 5

5) Copy one string to another using
strcpy()

```
#include <stdio.h>
#include <string.h>
int main() {
    char src[100], dest[100];
    printf("Enter source string: \n");
    scanf("%s", src);
    strcpy(dest, src);
}
```

```
printf("copied string : %s\n", dest);  
return 0;  
}
```

output ::

Enter source string : Nivetha
copied string : Nivetha.
