

Task 1:

1) Print "Hello, world!" to the console

```
#include <stdio.h>
```

```
int main() {
```

```
    printf("Hello, world!\n");
```

```
    return 0;
```

```
}
```

output:

Hello, world!

2) Declare and print integer variable age=20

```
#include <stdio.h>
```

```
int age = 20; int main() {
```

```
    printf("Age: %d\n", age);
```

```
    return 0;
```

```
}
```

output:

Age: 20

3) Take an integer input from user and display it

```
#include <stdio.h>
```

```
int main() {
```

```
    int number;
```

```
    printf("Enter an integer: ");
```

```
    scanf("%d", &number);
```

```
    printf("You entered: %d\n", number);
```

```
    return 0;
```

```
}
```

output:

Enter an integer: 45

You entered: 45

4) Add two integers and print result

```
#include <stdio.h>
```

```
int main()
```

```
{  
    int a, b, sum;
```

```
    printf("Enter first number:");
```

```
    scanf("%d", &a);
```

```
    printf("Enter second number:");
```

```
    scanf("%d", &b);
```

```
    sum = a + b;
```

```
    printf("Sum of %d and %d is : %d\n", a, b,
```

```
sum);
```

```
    return 0;
```

```
}
```

output:

Enter first number: 5

Enter second number: 10

Sum of 5 and 10 is : 15

5) Store and display integer, float and

Character

```
#include <stdio.h>
```

```
int main()
```

```
{  
    int number = 10;
```

```
    float rate = 5.75;
```

```
    char grade = 'A';
```

```
    printf("Integer: %d\n", number);
```

```
    printf("Float: %f\n", rate);
```

```
    printf("Character: %c\n", grade);
```

```
    return 0;
```

output:

Integer: 10

Float: 5.75

Character: A
